Allowable Subject Matter

1. Claims 1-33 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The closest prior art, Herz of the record teaches a system and method for scheduling broadcast the selected programs based on customer profiles and content profiles.

Particularly, Herz teaches that a set top terminal stores customer profiles for each household and the received content profiles from provider in one-way implementation.

The set top terminal compares the characteristics between content profiles and customer profiles to calculate agreement matrix. Once the agreement matrix has been generated, the programs with the highest values and hence closest match to the customer's profiles are prioritized and selected as virtual channels at the set top terminal. Herz also teaches a passive feedback technique to provide information from set top terminal back to the headend so that the programming schedule may be adjusted and so that targeted advertising/programming may be provided from the head end to the set top terminal. In this two-way implementation, the customer profiles and control profiles are maintained at the headend. Herz fails to teach or fairly suggest the limitation "transmitting a match signal from the user location to the source of contents *only* when the number of matches between the parameters in the set of parameters and the preference characteristics in the user profile is at least a sufficient number to classify the user as a member of a target group of the at least one content, *the match signal indicating that at least a sufficient number of matches were determined*" as recited in claim 1 and similarly included in claims 13 and 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the
